OPERATION OF SPRING SWITCHES.

TRAIN MOVEMENTS MAY BE MADE "THROUGH" THE SWITCH IN A TRAILING POINT DIRECTION WITHOUT OPERATING THE SWITCH STAND.

Train movements over the switch in both directions will be governed by color light type signals, located at the switch, displaying a "LUNAR WHITE" light to designate a "SPRING SWITCH IN NORMAL OPERATING CONDITION", and "RED" for "STOP AND PROCEED".

The speed of a train "RUNNING THROUGH" the Spring Switch shall not exceed 15 M.P.H. until the leading truck has passed through the switch, when normal speed may be resumed.

When part of a train has "RUN THROUGH" the Spring Switch, no movement shall be made in the opposite direction until the Switch has been thrown to the reversed position by means of the switch stand, TO BACK UP THE TRAIN BEFORE SWITCH HAS BEEN THROWN WILL CAUSE A DERAILMENT.

When a train moving in either direction, not "through" the switch, is stopped by a "STOP AND PROCEED" signal at the Spring Switch, it may proceed after making certain that the switch is properly set for such movement.

When a train moving in the direction to run "THROUGH" the switch is stopped by a "STOP AND PROCEED" signal at the Spring Switch, it may proceed after throwing the switch by hand and making certain that it is properly set for such movement. Switch shall be returned to its NORMAL POSITION after train movement through it has been completed.

INSTRUCTIONS RELATIVE HANDLING LOGS.

Flat or skeleton cars loaded with logs must not pass thru tunnels without permission of Superintendent.

Must be inspected before passing over drawbridges and Howe truss spans.

Must not exceed 20 miles per hour.

Trainman must be on rear platform while train is in motion.

In double track territory, conductor must notify dispatcher when logs are to be handled and trains must be at stop when meeting or being passed by other trains, except when two trains handling logs are meeting or passing.

AUTOMATIC BLOCK SIGNALS

Supplement to Rule 509 (B). When a train is proceeding through a block on a STOP AND PROCEED indication, all facing point switches shall be examined before passing over them. When stopped by a STOP AND PROCEED indication at the leaving end of a siding, enginemen and trainmen should understand that such signal indication may be due to an opposing train proceeding into the same block at the opposite end under an Approach signal indication, Rule 501 (B), and before proceeding into the block, every precaution, consistent with running orders, and the nature of the track ahead, should be taken to insure safe movement thru the block.

In electrified zone and double track territory, logs must be secured to cars by chains or cables, except between Hillyard and Fort Wright.

On single track, trains must be at stop when meeting or being passed by passenger trains, except when there are more cars than siding will hold, when it will be permissible to pull by passenger trains slowly.

STANDARD INTERLOCKING RULE 672, SUPPLEMENTED BY THE FOLLOWING SHALL GOVERN IN THE USE OF AUTOMATIC INTERLOCKING PLANTS. ADDITIONAL INSTRUCTIONS AS REQUIRED WILL BE POSTED IN RELEASE BOXES.

If smash boards or semaphore type signals are not in use trainmen, before giving hand signal in accordance with rule 672, shall place a burning red fusee at each home signal on conflicting routes. If smash boards or semaphore type signals are in use, and may be plainly seen to be in their "normal" position (set against train movements on conflicting routes), the placing of fusees will not be required.

When necessary to operate smash board mechanism by hand, crank for this purpose is located in RELEASE box. Crank must be inserted in shaft on back of smash board mechanism after opening small cover locked with standard switch lock. Crank should be turned slowly and uniformly until movement has completed its entire stroke and smash board has been moved to its "reverse" position. When operation is complete small cover must be locked and crank returned to the RELEASE box.

NEW WESTMINSTER SEMI-AUTOMATIC. FRASER MILL SPUR CROSSING AND CROSS OVER TO WATERFRONT TRACK.

Great Northern train movements over Fraser Mill spur crossing will be governed by manually operated gates. G. N. route over Fraser Mill spur crossing will be set manually after obtaining release of electric lock holding gates in STOP position.

Great Northern train movements from Main Track to Waterfront Track over C.P.R. crossing will be governed by indicator and electrically operated lock on main track switch stand. Great Northern route from main track to Waterfront Track over the C.P.R. crossing will be set manually after obtaining release of electric lock holding main track switch in normal position. Both ends of this long crossover are handled by the main track switch stand.

To unlock gates or switch, train man shall open lock box locked with standard switch lock and if light indicator is burning, push operating button. If the semaphore indicator in the lock box indicates CLEAR at close of this operation, gates or switch may be unlocked by raising the handle under the indicator to the vertical position. Handle must be left in this position until gates or switch are closed after train movement is completed, when it must again be placed in the NORMAL position before door of the box can be locked.

If pushing the operating button does not bring about the above operation and no conflicting train movement on the C.P.R. is evident, trainman shall operate time release provided in box marked "RELEASE" and locked with a standard switch lock.

Turn knob to the right until stopped, hold a few seconds and let go. Clockwork movement will return pointer to zero or NORMAL position after a period of from one to two minutes. Under ordinary conditions the completion of the return movement should release the electric lock as indicated by the Semaphore indicator.
