Westward trains are superior to eastward trains of the same class.

SEE ADDITIONAL SPECIAL INSTRUCTIONS PAGES 9 THROUGH 17.

# ALL SUBDIVISIONS

#### 1. INSTRUCTIONS GOVERNING THE OPERATION OF STREAMLINER TRAINS.

# **CLEARING OF STREAMLINERS.**

p

The time of No. 1 must be cleared by westward first class trains not less than 5 minutes before No. 1 is due to leave the last station where time is shown, and by other westward trains not less than 10 minutes before No. 1 is due to leave the last station where time is shown.

The time of No. 1 must be cleared by eastward first class trains, except No. 2, not less than 10 minutes at all stations, and by other eastward trains not less than 15 minutes.

The time of No. 2 must be cleared by eastward first class trains, except No. 22, not less than 5 minutes before No. 2 is due to leave the last station where time is shown, and by other eastward trains not less than 10 minutes before No. 2 is due to leave the last station where time is shown.

The time of No. 2 must be cleared by westward first class trains, except No. 1, not less than 10 minutes at all stations, and by other westward trains not less than 15 minutes.

Within yard limits, yard engines and light engine movements must clear the main track not less than 10 minutes before Nos. 1, 21, 2 and 22 are due to leave last station where time is shown.

MAXIMUM PERMISSIBLE SPEED OF STREAMLINERS. Streamliner trains will be so designated in column with schedule number.

Maximum permissible speed of Streamliner trains will be designated by distinctive reflectorized roadway signs set in an upward angle of 45 degrees as prescribed in Item 2(b)—SPEED RESTRICTIONS GENERAL—ALL SUBDIVISIONS.

# 2. SPEED RESTRICTIONS GENERAL.

ZONE TERRITORIES AND MAXIMUM PERMISSIBLE SPEED OF PASSENGER TRAINS, INCLUDING STREAMLINERS, OPERATING VIA ROUTES INDICATED BELOW:

1651	.2"	1653.345	45

(a) Where Automatic Block and Interlocking Rules and Signal Indications require movement at RESTRICTED SPEED, such movements must be made prepared to stop short of train, obstruction, or switch not properly lined and on the lookout for broken rail or anything that may require the speed of a train to be reduced, but not exceeding 15 MPH or as much slower as necessary and where conditions require the movement must be controlled so stop can be made in time to avoid accident.

(b) Maximum permissible speed of passenger, freight and mixed trains, including Streamliners, will be designated by distinctive reflectorized roadway signs set in an upward angle of 45 degrees. Except as directly affected by speed restrictions prescribed in Items 1 and 2—ALL SUBDIVISIONS—and other speed restrictions covered by Item 2 under individual Subdivisions, the 45 degree signs designate zone speed territories and the numerals thereon indicate in miles per hour the maximum permissible speed which will govern until the next zone sign is reached.

When the movement is from a higher to a lower speed zone, the zone sign is located approximately one mile from the point where the lower speed becomes effective. At the end of this one mile is located a reflectorized angular Restricting Sign, yellow background with black stripes, indicating the point where lower speed becomes effective. Lower speed to govern until entire train passes next zone sign.

When the movement is from a lower to a higher speed zone, the 45 degree sign is located at the point where speed may be increased.

When operating against the current of traffic in double track territory, trains must not exceed the maximum permissible speed prescribed by the 45 degree sign with the current of traffic. This does not modify Rule 93.

The 45 degree sign has two sets of figures. The numerals preceded with letter "P" apply to passenger trains, including Streamliners, and letter "F" to freight and Mixed trains.

(c) When passenger trains, including Streamliners, are handled by Deisel engines, Electric engines, passenger or freight steam engines, the train will not exceed the maximum speed authorized by Speed Limit Plate on engines, and will be governed by the 45 degree signs where a lower speed is prescribed.

When freight cars, except cars equipped with steel wheels, air signal and steam heat lines, are handled in passenger trains, including Streamliners, the train will not exceed maximum permissible speed for freight trains in the territory operated.

(d) Speed shown on Speed Limit Plate on engines must not be exceeded.

(e) Steam engines backing up	20 MPH
Steam engines in forward motion running light or with caboose only	95 M DH
Diesel and Electric engines light or with caboose only	
Trains handling, not in actual service, derricks, pile	
ditchers, cranes, shovels, Jordan spreaders, wedge plow	s, etc.:
On tangent main line track	30 MPH
On curves on main line track	2 <b>5 MP</b> H
On branch lines	15 MPH

9

Trains handling ore cars or air dump cars loaded with ore or gravel and scale test car on Main Lines 30 MPH
except on 6 degree curves or sharper, and on Branch Lines
Unless conditions require a further speed restriction, trains or engines moving against the current of traffic on double track thru interlockings
Trains or engines moving on main routes actuating points of spring switches
Trains or engines moving in facing point direction at spring switches without facing point lock
Trains or engines thru No. 20 turnouts at: 35 MPH Hillyard, end of double track east and west end of yard. Fort Wright, end of double track. Fort Wright, SP&S Junction. Bluestem, end of double track. Lamona, end of double track. Lamona, east siding switch. Wilson Creek, west siding switch. Stratford, east and west siding switch. Adrian, east and west siding switch. Quincy, east and west siding switch. Voltage, east siding switch. Malaga, east and west switch. Appleyard, #1 switch east lead. Appleyard, #2 crossover switch.
Trains or engines thru No. 15 turnouts at:

Wenatchee, east and west crossover switch west end of yard.

On single track, trains containing such cars must be at stop when on siding or adjacent track when meeting or being passed by other trains, except when there are more cars than siding will hold, it is permissible for such train to pull by other train at restricted speed.

#### 8. MOVEMENT OF ENGINES DEAD IN TRAINS.

Class O and larger engines will be placed not to exceed 15 cars behind road engine. In electrified zone only class R engines will be handled on head end, all others near rear.

Class F-8 and smaller engines will be placed next ahead of caboose.

Diesel and Gas-Electric engines 2302-2341 must be handled on rear of train.

Not less than five cars will be placed between all engines.

Trains handling Great Northern steam engines dead in train with side rods on both sides will not exceed 40 MPH; and without side rods will not exceed 10 MPH.

Trains handling foreign line steam engines with side rods on both sides will not exceed speed designated by Superintendent; and without side rods will not exceed 10 MPH.

Engines that have any of the truck or driving wheels removed will not be moved in a train without authority of Superintendent. Trains handling Electric, Diesel and Gas-Electric engines in tow dead in train will not exceed following speeds:

# Engine Number

1 to 28, 75 to 170, 247 to 249, 253 to 259, 262 to 265.		
1 to 28, 75 to 170, 247 to 249, 253 to 259, 262 to 265, 307 to 317, 400 to 468	50	MPH
175 to 232, 271 to 274, 276 to 279, 550 to 572, 600 to		
655		MPH
250, 251, 260, 261, 266 to 270, 275, 280, 281, 350 to		
365, 500 to 512		MPH
2302 to 2324		
2325 to 2339	60	MPH
5000 to 5008	45	MPH
5010 to 5019	55	MPH

Maximum Speed

## 4. ELECTRIC BRAKES.

In event of failure of the electric straight air brakes, or if electric brakes cannot be used on account of cars not equipped with electric air brakes being handled in the train, the automatic air brake will be used.

Between terminals, if engineer finds electric brakes not operating properly he shall immediately change brake valve over to automatic air brake operation and open circuit breaker to electric brake circuits. After changing from electric straight air brake operation to automatic air brake operation the train will be handled with automatic air to the next terminal where standing terminal air brake test can be made by carmen. Terminal brake tests should then be made with electric straight air straight air if brakes function properly during terminal test.

5. Before leaving any engine terminal enginemen will make proper tests and inspections of water glasses, gauge cocks, water column and injectors, and will not leave the terminal unless all these are in proper working order.

Should enginemen on steam engines find that the water is not in sight in water glass and if water cannot be raised to bottom gauge cock or water glass by opening throttle, on oil burning engines the fire must be extinguished immediately and on coal burning engines the fire must be knocked out or smothered to the extent there will be no damage done to the crown sheet. If water can be raised to the bottom gauge cock or water glass, the water level should be built up by use of the pump, or injector, or both.

Should the low water alarm whistle blow, on any engine so equipped, enginemen will immediately ascertain where the water level is in the boiler by blowing out water glasses and water column, and being sure that water glass mounting valves are open and if water cannot be raised to the bottom gauge cock or water glass by opening throttle, enginemen will be governed by instructions in the preceding paragraph.

- 6. Under Rule 24, engine number only will be displayed in indicators on engines so equipped. This will also apply when our engines are operating over Northern Pacific tracks. Between Klamath Falls and Chemult, Southern Pacific Rules will govern.
- 7. When two or more Diesel or Electric engine units are coupled together the numerals and suffix letter, where provided, of the leading unit will be illuminated at all times when in service. The numerals and suffix letter of trailing units must not be illuminated.

The numerals and suffix letter of the leading unit only will be used in train orders as prescribed by Consolidated Code Rule 206.

- 8. Gas-Electric engines must not be fueled while occupied by passengers, or coupled to cars occupied by passengers.
- 9. Air hose on Diesel and Electric engines must be hooked up in hose fastener when not in use.

# 10. EMPLOYES WILL BE GOVERNED AS FOLLOWS ON EN-GINES, PASSENGER AND FREIGHT CARS EQUIPPED WITH ROLLER BEARINGS:

Roller bearing failures on cars or engines equipped with roller bearing journal boxes may be due to lack of oil or grease. If the box is not blazing, the oil plug in the cover should be removed and engine or valve oil added. Oil must never be added to a box that is blazing. Grease lubricated roller bearing boxes have grease plugs locked with metal strap which must be cut off with chisel before plug can be removed. After the oil has been added and plug replaced, the train should proceed at re-duced speed and care exercised until it is apparent that the box will run cool. If fire develops in roller bearing box on any equipment, it must be closely watched, train moved slowly, and Superintendent notified from first available point of communica-tion who will preserving for the measurement tion, who will prescribe for the movement.

Some engines and cars equipped with roller bearings have heat Some engines and cars equipped with roller bearings have heat indicators or stench bombs inserted in the housing of boxes which release a strong pungent odor in the event of excessive journal box temperatures. When this odor is detected, train must be stopped at once and box located. Compare the tem-perature of this box with other boxes on the same engine or car, check the oil level, and if there is no evidence of overheat-ing, train may proceed, but if the box is overheating proceed only as instructed in the preceding paragraph as instructed in the preceding paragraph.

Ore cars and covered hopper cars equipped with roller bearings have the lettering "TIMKEN ROLLER BEARINGS" stencilled beneath the lettering "GREAT NORTHERN" on each side of the car.

Cars and engines equipped with roller bearings must not be allowed to stand alone, even on level track, without brakes being adequately applied.

12. Trains 1, 2, 3, 4, 7, 8, 11, 12, 19, 20, 23 and 24 carry 100 ft. of steam hose in two 50 ft. lengths equipped with standard vapor and engine steam dome connections for emergency use in event of steam failure on train engine and non-steam train line engine furnished to handle train. In case of steam line failure on a car, connect both hoses together to run around such car so can be taken to first terminal, using combination standard Vapor and steam dome connections attached to reel. Car must be drained before proceeding.

- 13. Under Rule 2, watches that have been examined and certified to by a designated inspector must be used by train dispatchers and yardmen.
- 14. Brakemen with less than one year of experience should not be used as flagmen except in emergency, and then Superintendent will be notified by wire.
- 15. When operating snow machines in non-block signal territory, no train should be permitted to follow closer than a station apart, when that cannot be done, they will be blocked not less than thirty minutes apart.
- 16. After severe blizzard or dirt storm, employes on first train over road must exercise care to avoid accident caused by striking drift without first having drifts faced with hand shovels, cutting in far enough to get beyond the hard snow and giving a per-pendicular wall to strike against instead of slope or wedgelike shape. When operating snow dozer, conductor in charge will ride in dozer. On snow and dirt dozers every precaution must ride in dozer. On snow and dirt dozers every precaution must be taken to see that cage, flangers and wings clear all obsta-cles when in service and are properly secured when in thru trains, and dozers properly turned. Hand screws must be tight-ened to raise flangers on dozers as high as possible before mak-ing a back-up movement, and must not be released until the dozing work is actually to start. Hand screws holding the cage on dozers must be tightened or chains otherwise fastened except when dozer has air in cylinders and is attended by an employe.
- 17. Loaded dump cars should not be handled on double track after dark, but if necessary to do so, close watch must be kept by trainmen and if a car dumps its load, train must be stopped and protection afforded on the opposite track.
- 18. Unless otherwise provided, when passenger trains are operated against current of traffic on double track or through sidings, conductors shall notify Railway Postal Clerks; trains shall stop at points where U. S. Mail is usually picked up and conductors are responsible for delivery of mail to Postal car.
- 19. Conductors will report by wire all flat spots on wheels of pas-senger cars. Any cars having flat spots on wheels of more than two and one-half inches long must be set out.
- 20. Due to limited overhead clearance at tunnels and structures, employes are warned to keep off top of cars of extreme height and width when handled in trains and yards, also such standing cars in electrified zone, except in emergency. In absence of previous advice on such cars, wire proper officer for instructions.
- 21. The Railway Company is responsible for proper handling of perishable freight on road and at points where Western Fruit Express Company does not maintain representatives. Conductors on trains handling perishable freight will ascertain from waybills class of service required and light or extinguish heaters and manipulate vents in accordance with current in-structions provided for handling perishable freight issued by the National Perishable Freight Committee.
- 22. Placarded loaded tank cars handled in through freight trains shall not be nearer than 6th car from engine, occupied caboose or passenger car.

Cars placarded "Explosives", "Inflammable", "Corrosive Liq-uids", or "Poison Gas" handled in through freight trains, local and mixed trains, shall not be nearer than 16th car from engine, occupied caboose or passenger car.

When length of train will not permit handling of cars as pre-scribed above—ANY PLACARDED CAR, loaded with above commodities—shall be placed near middle of train, but not nearer than 2nd car from engine, occupied caboose or passenger car.

When switching such cars in terminal yards they must be sepa-rated from engine by at least one non-placarded car. When placarded cars described above are handled in freight trains made up in "blocks" or classifications, placarded car or cars shall be placed near middle of the "block" or classification, but not nearer than 6th car from engine, occupied caboose or passenger car.

When such placarded cars are placed in trains they must not be placed next to each other, next to refrigerators equipped with gas-burning heaters, stoves or lanterns, or next to loaded flat cars, or gondola cars containing lading higher than ends of car that is liable to shift.

Carload express shipments of explosives, sealed and placarded, may be handled on passenger trains; LCL shipments may be made in so-called peddler car with messenger in charge when such car is assigned to the handling of express and baggage exclusively.

Terminal or pick-up points enroute must furnish conductor and engineer Form 250 showing consecutively location in train of all cars placarded "Explosives". At points other than terminals where crews change, notice will be transferred from crew to crew.

Employes will be guided by further instructions governing handling of loaded tank cars, Explosives, Inflammables, Corrosive Liquids, and Poison Gas found in I. C. C. Regulations and Consolidated Code Rules 726(C) and 808.

23. The normal position of a spring switch with facing point lock is identified by a color light type signal displaying a "lunar white" light for train or engine movements in a trailing point direction and for movements in facing point direction when conditions require.

The normal position of a spring switch without facing point lock is identified by a triangular yellow target on switch stand with letter "S" in black and "lunar white" light in switch lamp in place of green light displayed in both directions thru or over the switch.

Trains departing from stations, either from siding or main track in trailing point movement actuating points of spring switches, a member of crew must observe indication of governing signal in opposite direction after rear end of train has passed thru switch to ascertain if switch points return to normal position. If this signal indicates Stop and no immediate train movement or other cause is evident report the fact to Superintendent from first available point of communication.

During and immediately following snow storms or violent wind storms, spring switches must be operated by hand and relined to normal position before heading out through switch in trailing point movement, actuating switch points, to insure switch is in proper operating condition.

# INDICATORS AT SPRING SWITCHES.

A Switch Indicator, consisting of a single yellow light unit (normally dark) and a switch-key-controller mounted on an iron mast located at clearance point of a siding, must be operated by a member of the crew who, together with engineer, must observe and be governed by its indication before fouling main track or making movement from siding to main track thru a spring switch in automatic signal territory, unless the movement is made immediately after an opposing train has passed the switch and Automatic Signal at leaving end of siding indicates "Proceed".

If Indicator displays a yellow light when switch-key-controller is operated, train or engine movement to main track may be made immediately in accordance with train rights and operating rules. Display of yellow light must continue until leading wheels have passed clearance point.

If Indicator does not display a yellow light when switch-keycontroller is operated, train or engine movement to main track may be made in accordance with train rights and operating rules, after operating spring switch by hand; waiting three minutes and taking every precaution to provide proper protection.

To operate Switch Indicator, insert switch key in controller and turn clockwise toward "R", hold a few seconds and remove key. If yellow light is displayed and intended movement is not made, insert switch key in controller and turn counter-clockwise toward "N" to restore signal system to normal condition to avoid delay to trains on main track.

Switch-key-controller must never be operated toward "N" after having been operated toward "R" if intended movement to main track is to be made.

- 24. Facing point locks on hand operated switches are indicated by a six inch yellow stripe painted on target staff. Be positive locking device is restored to normal position after using. A running switch must not be made thru this type switch.
- 25. DRAGGING EQUIPMENT DETECTOR INDICATOR consists of a single white light unit (normally dark) with a circular background mounted on signal or other mast. When white light is displayed, train must be stopped and inspected for dragging equipment. Notify Superintendent from first available point of communication.
- 26. Rule 204 (A) prescribes that copies of train orders will be furnished the rear trainman, such orders will only be furnished on trains designated: Nos. 1, 2, 3, 4, 7, 8, 9, 10, 27, 28, 29, 30, and sections thereof; also, extra passenger train whether operated as section of regular train or as a passenger extra.
- 27. OSCILLATING EMERGENCY RED HEADLIGHT will be immediately displayed by day or night when a train is disabled or stopped suddenly by an emergency application of air brakes or when engineer and conductor find it necessary to stop train due to some defect which might cause accident, over-running clearance point at meeting and waiting points, end of double track or junction.
  - Engineer of an approaching train observing display of emergency red headlight must stop before passing and be governed by conditions existing. If operating on adjacent track, ascertain and if safe for passage, then proceed at restricted speed until train is passed.

OSCILLATING EMERGENCY RED REAR END LIGHT is of two types—Automatic Control—Portable Manual Control—and except as otherwise provided must be displayed by day or night each time train stops or is running at speed less than 18 MPH. Automatic Control type automatically functions in this manner. However, when train running at speed above 18 MPH and moving under circumstances in which it might be overtaken by another train or engine and during foggy and stormy weather, light may be operated manually with emergency switch and employes to afford other protection prescribed by rule. THE USE OF EMERGENCY RED HEADLIGHT AND REAR END LIGHT DOES NOT IN ANY WAY RELIEVE ENGINE-MEN AND TRAINMEN FROM RESPONSIBILITY OF COM-PLYING WITH RULES 99 AND 102.

Emergency red rear end light must be extinguished: when standing at origin and terminus stations of train run; when switching being performed from rear; when on siding to be passed by another train; and, when another train operating on adjacent track is approaching from rear, but not until it is known such train is not on same track.

Portable light must be removed before coupling to rear of such car.

Oscillating white light on engines will be displayed in addition to standard headlight governed by Rules 17 and 17(B). In case of headlight failure it can be used as emergency headlight or as a focus light by push button control if desired.

Enginemen and trainmen on trains and engines equipped with oscillating emergency red lights must familiarize themselves with the operation of the lights.

- 28. Rule D-97 is in effect on this division.
- 29. Trains handling flat or skeleton cars loaded with logs must stop at appropriate locations immediately before passing over through-truss bridges or through tunnels and make thorough inspection of all cars of logs in their train, making certain train and lading are in safe condition before proceeding. Extra stops en route will be made for this purpose when in the judgment of the conductor it is necessary.

Trainmen must maintain watch behind their trains for logs that may have rolled off cars and if main track is fouled take prompt action to protect trains.

On double track, conductors must notify train dispatcher when logs are to be handled and the log train must be at stop when

# 12

being passed by other trains, except that when two trains handling logs are passed, either one should stop until the other train has pulled by whether on siding or double track. On single track, trains handling logs must be at stop when meeting or being passed by passenger and freight trains, except when there are more cars than siding will hold, it is permissible for log train to pull by such trains at restricted speed. Unless conditions require further speed restrictions, trains han-dling logs must not exceed 25 MPH.

- 30. Red signs on frost boxes of water and oil tanks. In case of emergency, close large valve in frost box.
- 31. Canadian Maintenance of Way flagging Rules 40 through 49 found on pages 216 through 220 in the Consolidated Code are in effect in Canada.

#### (Main Line)

L	MAXIMUM PERMISSIBLE SPEED FOR T	RAINS.	
	Between	Passenger	Freight
	Hillyard and Lyons	45 MPH	85 MPH
	Lyons and Wenatchee	79 MPH	50 MPH
2.	SPEED RESTRICTIONS.		970

Spokane, all trains approach crossover east of bridge 270, and crossover west of Howard Street at restricted speed. 

Spokane, public crossing Howard Street
other public crossings 20 MPH Bridge 270, Spokane, R, SP&S E-1, Z-6 20 MPH
Bridge 273, Spokane, Q-1, S-1, N-8, SP&S E-1
Bridge 274, Fort Wright, Q-1, R, S-1, N-8, SP&S E-1, Z-6
Between Fairchild and Geiger Field:
All trains on straight track
on curves and public crossings
Ephrata, 2.2 miles east of, Air Base Washington spur 8 MPH
Between Home Signals of Interlocking at: 20 MPH
Spokane, U.P.R.R. Crossing.

#### 8. ENGINE RESTRICTIONS ON INDUSTRY TRACKS.

Engines heavier than O class not permitted on following tracks: Between Fairchild and Geiger Field, and on spur track serving Army Northwest Air Depot Yard at Fairchild.

Ephrata, 2.2 miles east of, Air Base Washington Spur, south of siding.

#### 4. TRAIN REGISTER EXCEPTIONS.

Hillyard, First class trains and passenger extras register by ticket.

Spokane, first class trains and trains originating or terminating at passenger station will register and receive clearance.

Appleyard, register is for second and inferior class trains; passenger extras will register by ticket.

Wenatchee, register is for first class trains, Nos. 253-254 and passenger extras.

# 5. CLEARANCE PROVISIONS AND EXCEPTIONS RULE 83(B).

Spokane, clearance issued and signed by the Superintendent will confer the same authority to a first class train as though received at its initial station.

# 6. RESTRICTED CLEARANCES.

In electrified zone all wires must be considered alive unless a clearance has been obtained from operator at Skykomish Substation.

Appleyard, and between Appleyard and Wenatchee, high voltage electric wires over tracks will not clear man on top of cars. Train and engine men must keep off top of cars and engines passing thru this territory, except in emergency, then use extreme caution.

The following overhead wires crossing our track and trolley in electrified zone, do not have standard clearance of 27 ft. from top of rail:

Between Appleyard & Wenatchee, Bridge Street viaduct. Over Lead track ... 21'.

- 7. Double track extends between Hillyard and Fort Wright, except over bridge 274 and S.P.&S. Jct. which is governed by interlocking signals.
- 8. Spokane, Trent avenue crossing protected by watchmen between hours 7:00 A.M. and 11:00 P.M. daily, outside these assigned hours a member of crew must be on ground at crossing to protect movement.
- Spokane, City Ordinance prohibits sounding engine whistle with-D. in city limits, except to prevent accident not otherwise avoidable, or to signal an interlocking, or to communicate with a flagman.
- 10. Fort Wright, instructions for operation of electric switch locks Military Spur and west siding switch posted in iron oox locked with switch lock.
- 11. Wenatchee, westward trains moving from W-O Line lead to First Subdivision and required to wait for westward trains on First Subdivision shall stop east of sign reading "Wait Here". For further details and push button operation see instructions posted in iron box locked with switch lock.
- 12. Normal position of the switch on the siding at Adrian, connection with the Northern Pacific is for the Great Northern.

14 13. Appleyard, Yard lead switch and crossovers main track to yard 19 lead are located as follows: #1 switch designating the east lead—200 ft. west of Br. 361.
#2 crossover switch—100 feet west of MP 1647.
#3 crossover switch—at culvert 1647.60. Wenatchee: #1 crossover, one mile east of depot.
#2 crossover, 800 ft. east of depot.
#3 crossover, 670 ft. west of depot.
#4 crossover, 685 ft. west of depot.
#5 crossover, Fifth St., one mile west of depot. Olds crossover, 3 miles west of depot. Crossovers 1, 2 and 4 are trailing point, and 3, 5 and Olds 20. are facing point for eastward trains. 14. SPEED TEST BOARDS. Engineers shall test speed of their trains passing following points as compared with Speed Table: Westward. Between MP 1492 and MP 1493 just east of Fairchild, Eastward. Between MP 1612 and MP 1613 two miles west Winchester, Between MP 1644 and MP 1645 just west Malaga. 15. CROSSOVERS ON DOUBLE TRACK. Trailing point. MP 1473.14 west of Hillyard. MP 1476 east of UP. RR. cross-Facing point. ing, Spokane. MP 1476.69 on Br. 269, Spokane. MP 1477.12 east of Br. 270, Spokane. MP 1477.61 (Scissors) on Br. MP 1477.22 east of Br. 270, Spokane. MP 1477.61 (Scissors) on Br. 273 west of Spokane passenger depot. MP 1478.41 west of Br. 273, 278 west of Spokane passenger depot. 350' east of depot, Harring-Spokane. 3200' west of depot, Mohler. 2000' west of depot, Downs. ton. 16. Lamona, east siding switch. Nemo, east and west siding switch. Odessa, east and west siding switch. Irby, east and west siding switch. Wilson Creek, east and west siding switch. Stratford, east and west siding switch. Adrian, east and west siding switch. Ephrata, east and west siding switch. Quincy, east and west siding switch. Trinidad, east and west siding switch. Voltage, east and west siding switch. Malaga, east and west siding switch. Appleyard, east switch long lead. east crossover switch long lead. Wenatchee, east and west crossover switch west end of yard. Normal position is for main track. 17. SPRING SWITCHES WITHOUT FACING POINT LOCK. Hillyard, east end yard, connection of east yard lead to track No. 5. Normal position is for track No. 5. **18. DRAGGING EQUIPMENT DETECTOR INDICATORS.** Westward, on signal; 1623.8 approximately two miles east Trinidad. 1625.7 just east Trinidad. 1640.1 just west Rock Island.

Eastward, on signal; 1623.8 approximately two miles east Trinidad. 1621.8 approximately one mile west Crater. 1480.2 just west Ft. Wright.

).	MANUAL INTERLOCKINGS.
	Spokane, 1.17 miles east of,
	Whistle signals for routes:
	Spokane, UP RR. crossing:
	Main track
	GN-SI Ry Transfer No. 22 long, 1 short.
	Fort Wright:
	Main Track GN Ry
	Main Track SP&S Ry1 long, 1 short. Siding GN Ry2 long, 1 short.
	MANUAL INTERLOCKINGS WITH DUAL CONTROL
	SWITCHES.
	Hillyardend of double track east and west end of yard, Interlocking includes interlocked switches at east end of yard (end of double track, yard lead, and safety switch); at west end of yard (end of double track, yard lead and spike yard lead)
	and the single main track between them electrically controlled by operator at depot.
	The "home signal limits" (Rule 605) of this interlocking for train and engine movements on main track extend from the westward home signals at east end of yard to eastward home signals at west end of yard.
	Trains and engines receiving a proceed indication of the govern- ing home signal will proceed, regardless of class, in accordance with Rule 605, observing all governing signal indications. Instructions for operation of Electric Locks and Releases posted in iron boxes locked with a switch lock.
	Whistle signals for routes west end of yard: Eastward trains,
	To main track1 long, 1 short, 1 long. To yard

Westward trains, To westward main track ......1 long. To eastward main track ......2 long, 1 short.

21. AUTOMATIC INTERLOCKINGS.

Bluestem ...... dual control switch end of double track. Lamona ...... dual control switch end of double track. Interlockings operate automatically for all movements with following exceptions:

Lamona, when movement is to be made from double track to siding, siding switch must not be lined until engine is within home signal limits.

Lamona, eastward train moving out of siding immediately after westward train has passed, must operate switch release push button located on eastward home signal to line route for eastward main track.

Bluestem, westward train moving out of siding immediately after eastward train has passed, must operate switch release push button located opposite switch to line route for westward main track.

# 22. SWITCH INDICATOR.

Rock Island, indicator located at Alcoa Spur.

Ephrata, indicator located at Air Base Washington Spur and Morrison-Knudson Spur.

Member of crew who is to line switches for train or engine movement from the spur to main track must first operate switch key controller in accordance with Item 23 Page 12 of this time table.

# SECOND SUBDIVISION

# (Oroville Line)

## 1. MAXIMUM PERMISSIBLE SPEED FOR TRAINS.

	Passenger	
Wenatchee and Janis	35 MPH	35 MPH
Janis and Oroville	35  MPH	30 MPH
Oroville and Hedley	25 MPH	25 MPH

#### 2. SPEED RESTRICTIONS. H-4 engines, on straight track ...... 80 MPH on curves ...... 20 MPH

3. ENGINES RESTRICTIONS. Engines heavier than class indicated are prohibited: Between Wenatchee and Janis, O-4 and 1600 H.P. Diesels, not

more than 2 units coupled. Between Janis and Oroville, F-8, H-4 and 1600 H.P. Diesels,

single unit. Between Oroville and Hedley, G-3, G-4 and 1600 H.P. Diesel

single units.

Additional units must be separated not less than five cars.

4. Nighthawk-Keremeos, trains will not pass International Border without permission of Customs and Immigration Inspectors at Oroville.
