ALL SUBDIVISIONS

1. SPEED RESTRICTIONS GENERAL.

(a) Where Automatic Block and Interlocking Rules and Signal Indications require movement at RESTRICTED SPEED, such movement must be made prepared to stop short of train, obstruction, or switch not properly lined and on the lookout for broken rail or anything that may require the speed of a train to be reduced; but not exceeding 15 MPH or as much slower as necessary; and where conditions require the movement must be controlled so stop can be made in time to avoid accident.

(b) Maximum permissible speed of passenger, freight and mixed trains will be designated by distinctive reflectorized roadway signs set in an upward angle of 45 degrees. Except as directly affected by speed restrictions prescribed in Item 1—ALL SUB-DIVISIONS—and other speed restrictions covered by Item 2 under individual Subdivisions, the 45 degree signs designate zone speed territories and the numerals thereon indicate in miles per hour the maximum permissible speed which will govern until the

next zone sign is reached.

When the movement is from a higher to a lower speed zone, the zone sign is located approximately one mile from the point where the lower speed becomes effective. At the end of this one mile is located a reflectorized angular Restricting Sign, yellow background with black stripes, indicating the point where lower speed becomes effective. Lower speed to govern until entire train passes next zone sign.

When the movement is from a lower to a higher speed zone, the 45 degree sign is located at the point where speed may be in-

creased.

In double track territory, when trains or engines are operated against the current of traffic or when one of the tracks is used as single track, in either case if the track being used is not signaled for traffic in the direction of the movement, the maximum permissible speed is, Passenger 59 MPH, Freight 49 MPH. This does not modify Rule 93. Further, trains and engines operating under the above conditions must not exceed the maximum permissible speed prescribed by the 45 degree signs with the current of traffic.

The 45 degree sign has two sets of figures. The numerals preceded with letter "P" apply to passenger trains and letter "F"

to freight and mixed trains.

(c) When passenger trains are handled by Diesel engines, Electric engines, passenger or freight steam engines, the train will not exceed the maximum speed authorized by Speed Limit Plate on engine, and will be governed by the 45 degree signs where a lower speed is prescribed.

When freight cars, except cars equipped with steel wheels, air signal and steam heat lines, are handled in passenger trains, the train will not exceed maximum permissible speed for freight trains in the territory operated.

(d) Speed shown on Speed Limit Plate on engines must not be

exceeded.

(e) Steam engines backing up	20 MPH
Steam engines in forward motion running light or with caboose only	35 MPH
Diesel and Electric engines, light or with caboose only	50 MPH
When cabooses are handled in passenger service, trains	
will not exceed speed of:	
when handling Cabooses X-100, X-198 to X-310	65 MPH
Cabooses X-330 to X-749	50 MPH
Trains handling non-revenue Great Northern cars that	
are equipped with "K" type air brake valves	
are to be operated in trains not exceeding 50	
cars at speed not exceeding	40 MPH
Traing handling not in actual gowing demister will	

Trains handling, not in actual service, derricks, pile drivers, ditchers, cranes, shovels, Jordan Spreaders, wedge plows, etc., on Main Lines...... 30 MPH except on 6 degree curves or sharper, and on Branch

Lines ________ 15 MPH

In double track territory, engineers on trains containing such cars must at all times use extreme care to avoid slack running

in or out when passing or being passed by other trains. On single track, trains containing such cars must be at stop

On single track, trains containing such cars must be at stop when on siding or adjacent track when meeting or being passed by other trains, except when there are more cars than siding will hold, it is permissible for such train to pull by other train at restricted speed.

2. MOVEMENT OF ENGINES DEAD IN TRAINS.

Class O and larger engines will be placed not to exceed 15 cars behind road engine.

Class C-1 and smaller engines will be placed next ahead of caboose.

Diesel and Gas-Electric engines 2303-2350 must be handled on rear of train.

Not less than five cars will be placed between steam engines moving dead in train.

Switcher and road switcher type Diesel engines G. N. numbers 1 through 232, and 600 through 711, moving dead in freight trains are to be handled near rear of train and behind helper engines. Where more than one unit is moved such units must be separated by a freight car. When towing multiple unit road type Diesel engines dead in freight trains, not more than four adjacent units are to be towed in a single grouping, separated from the road engine and additional groups by not less than five cars.

road engine and additional groups by not less than five cars. Trains handling Great Northern steam engines dead in train with side rods on both sides will not exceed 40 MPH; and without

side rods will not exceed 10 MPH.

Trains handling foreign line steam engines with side rods on both sides will not exceed speed designated by Superintendent; and without side rods will not exceed 10 MPH. Engines that have any of the truck or driving wheels removed Before leaving any engine terminal enginemen will make proper tests and inspections of water glasses, gauge cocks, water column and injectors, and will not leave the terminal unless all these are in proper working order.

Should enginemen on steam engines find that the water is not in sight in water glasses, and if water cannot be raised to bottom gauge cock or water glass by opening throttle, on oil burning engines the fire must be extinguished immediately and on coal burning engines the fire must be knocked out or smothered to the extent there will be no damage done to the crown sheet. If water can be raised to the bottom gauge cock or water glass, the water level should be built up by use of the pump, or injector, or both.

Should the low water alarm whistle blow, on any engine so equipped, enginemen will immediately ascertain where the water level is in the boiler by blowing out water glasses and water column, and being sure that water glass mounting valves are open and if water cannot be raised to the bottom gauge cock or water glass by opening throttle, enginemen will be governed by instructions in the preceding paragraph.

4. Under Rule 24, engine number only will be displayed in indicators on engines so equipped. This will also apply when our engines are operating over Northern Pacific tracks. Between Klamath Falls and Chemult, Southern Pacific Rules will govern.

5. When two or more Diesel or Electric engine units are coupled together the numerals and suffix letter, where provided, of the leading unit will be illuminated at all times when in service. The numerals and suffix letter of trailing units must not be illuminated.

The numerals and suffix letter of the leading unit only will be used in train orders as prescribed by Consolidated Code Rule 206.

Gas-Electric engines must not be fueled while occupied by passengers, or coupled to cars occupied by passengers.

7. Air hose on Diesel and Electric engines must be hooked up in hose fastener when not in use.

8. EMPLOYEES WILL BE GOVERNED AS FOLLOWS ON EN-GINES, PASSENGER AND FREIGHT CARS EQUIPPED WITH ROLLER BEARINGS:

Roller bearing failures on cars or engines equipped with roller bearing journal boxes may be due to lack of oil or grease. If the box is not blazing, the oil plug in the cover should be removed and engine or valve oil added. Oil must never be added to a box that is blazing. Grease lubricated roller bearing boxes have grease plugs locked with metal strap which must be cut off with chisel before plug can be removed. After the oil has been added and plug replaced, the train should proceed at reduced speed and care exercised until it is apparent that the box will run cool. If fire develops in roller bearing box on any equipment, it must be closely watched, train moved slowly, and Superintendent notified from first available point of communication, who will prescribe for the movement.

Some engines and cars equipped with roller bearings have heat indicators or stench bombs inserted in the housing of boxes which release a strong pungent odor in the event of excessive journal box temperatures. When this odor is detected, train must be stopped at once and box located. Compare the temperature of this box with the other boxes on the same engine or car, check the oil level, and if there is no evidence of overheating, train may proceed, but if the box is overheating proceed only as instructed in the preceding paragraph.

Cars and engines equipped with roller bearings must not be allowed to stand alone, even on level track, without brakes being adequately applied.

 COOLING AND STEAM BOILER WATERING FACILITIES FOR DIESEL ENGINES ARE PROVIDED AT THE FOLLOW-ING INTERMEDIATE STATIONS:

FIRST SUBDIVISION

THIRD SUBDIVISION

FOURTH SUBDIVISION

BEMIDJI: Both at depot.
FIFTH SUBDIVISION
SEBEKA: Both at depot.

 Under Rule 2, watches that have been examined and certified to by a designated inspector must be used by train dispatchers and yardmen.

 Brakemen with less than one year of experience should not be used as flagmen except in emergency, and then Superintendent will be notified by wire.

12. When operating snow machines in non-block signal territory no train should be permitted to follow closer than a station apart, when that cannot be done they will be blocked not less than thirty minutes apart.

13. After severe blizzard or dirt storm, employes on first train over road must exercise care to avoid accident caused by striking drift without first having drifts faced with hand shovels, cutting in far enough to get beyond the hard snow and giving a perpendicular wall to strike against instead of slope or wedge-like shape. When operating snow dozer, conductor in charge will ride in the dozer.
On snow and dirt dozers every precaution must be taken to see that cage, flangers and wings clear all obstacles when in service and are properly secured when in through trains, and dozers properly turned. Hand screws must be tightened to raise flanger

tually to start. Hand screws holding the cage on dozers must be tightened or chains otherwise fastened except when dozer has air in cylinders and is attended by an employe.

14. Loaded dump cars should not be handled on double track after dark, but if necessary to do so, close watch must be kept by trainmen and if a car dumps its load, train must be stopped

on dozers as high as possible before making a back-up move-

ment, and must not be released until the dozing work is ac-

and protection afforded on the opposite track.

15. Unless otherwise provided, when passenger trains are operated against current of traffic on double track or through sidings, conductors shall notify Railway Postal Clerks, trains shall stop at points where U. S. Mail is usually picked up and Conductors are responsible for delivery of mail to Postal car.

16. Conductors will report by wire, all flat spots on wheels of passenger cars. Any cars having flat spots on wheels of more than two and one-half inches long must be set out.

17. Engineers finding flat spots on Diesel engines in excess of two and one-half inches will immediately notify Superintendent who will prescribe for their movement.

18. Due to limited overhead clearance at tunnels and structures, employes are warned to keep off top of cars of extreme height and width when handled in trains and yards, also such standing cars in electrified zone, except in emergency. In absence of previous advice on such cars, wire proper officer for instructions.

19. The Railway Company is responsible for proper handling of perishable freight on road and at points where Western Fruit Express Company do not maintain representatives. Conductors on trains handling perishable freight will ascertain from waybills class of service required and light or extinguish heaters and manipulate vents in accordance with current instructions provided for handling perishable freight issued by the National Perishable Freight Committee.

 Placarded loaded tank cars handled in through freight trains shall not be nearer than 6th car from engine, occupied caboose or passenger car.

Cars placarded "Explosives", "Inflammable", "Corrosive Liqor "Poison Gas" handled in through freight trains, local and mixed trains, shall not be nearer than 16th car from engine, occupied caboose or passenger car.

When length of train will not permit handling of cars as prescribed above—ANY PLACARDED CAR, loaded with above commodities—shall be placed near middle of train, but not nearer than 2nd car from engine, occupied caboose or passenger car.

When switching such cars in terminal yards they must be separated from engine by at least one non-placarded car.

When placarded cars described above are handled in freight trains made up in "blocks" or classifications, placarded car or cars shall be placed near middle of the "block" or classification, but not nearer than 6th car from engine, occupied caboose or passenger car.

When such placarded cars are placed in trains they must not be placed next to each other, next to refrigerators equipped with gas-burning heaters, stoves or lanterns, or next to loaded flat cars, or gondola cars containing lading higher than ends of car that is liable to shift.

Carload express shipments of explosives, sealed and placarded, may be handled on passenger trains; LCL shipments may be made in so-called peddler car with messenger in charge when such car is assigned to the handling of express and baggage exclusively.

Terminal or pick-up points enroute must furnish conductor and engineer Form 250 showing consecutively location in train of all cars placarded "Explosives". At points other than terminals where crews change, notice will be transferred from crew to

Employes will be guided by further instructions governing handling of loaded tank cars, Explosives, Inflammables, Corrosive Liquids, and Poison Gas found in I.C.C. Regulations and Consolidated Code Rules 726(C) and 808.

In Automatic Block Signal Territory, the absence of the lunar light on a spring switch signal, Rule 501 E, page 114, of the Consolidated Code, will not be regarded as an imperfectly displayed signal, as prescribed by Rule 27, when the Automatic Block Signal governing movement over such switch indicates "Proceed". This does not modify Rule D-524.

The normal position of a spring switch with facing point lock is identified by a color light type signal displaying a "lunar white" light for train or engine movements in a trailing point direction and for movements in facing point direction when conditions require.

The normal position of a spring switch without facing point lock is identified by a triangular yellow target on switch stand with letter "S" in black, and "lunar white" light in switch lamp in place of green light displayed in both directions through or over the switch.

Trains departing from stations, either from siding or main track in trailing point movement actuating points of spring switches, a member of crew must observe indication of governing signal in opposite direction after rear end of train has passed through switch to ascertain if switch points return to normal position. If this signal indicates Stop and no immediate train movement or other cause is evident, report the fact to Superintendent from first available point of communication.

During and immediately following snow storms or violent wind storms, spring switches must be operated by hand and relined in normal position before heading out through switch in trailing point movement, actuating switch points, to insure switch is in proper operating condition.

INDICATORS AT SPRING SWITCHES.

Spring switch indicators consisting of a red and yellow light unit or a single yellow light unit (all units normally dark) mounted on an iron mast is located at the clearance point of a siding. The switch-key-controller mounted on the mast must be operated by a member of the crew who, together with engineer, must observe and be governed by its indication before fouling main track or making movement from siding to main track through a spring switch in automatic signal territory, unless the movement is made immediately after an opposing train has

passed the switch, and Automatic Signal at leaving end of siding indicates "Proceed".

If Indicator displays a yellow light when switch-key-controller is operated, train or engine movement to main track may be made immediately in accordance with train rights and operating rules. Display of yellow light must continue until leading wheels have passed clearance point.

If Indicator does not display a yellow light when switch-keycontroller is operated, train or engine movement to main track may be made in accordance with train rights and operating rules, after operating spring switch by hand; waiting three minutes and taking every precaution to provide proper pro-

To operate Switch Indicator, insert switch key in controller and turn clockwise toward "R", hold a few seconds, and remove key. If yellow light is displayed and intended movement is not made, insert switch key in controller and turn counter-clockwise toward "N" to restore signal system to normal condition to avoid delay

to trains on main track. Switch-key-controller must never be operated toward "N" after having been operated toward "R" if intended movement to main track is to be made.

- 23. Facing point locks on hand operated switches are indicated by a six-inch yellow stripe painted on target staff. Be positive locking device is restored to normal position after using. A running switch must not be made through this type switch.
- 24. DRAGGING EQUIPMENT DETECTOR INDICATOR consists of a single white light unit (normally dark) with circular back-ground mounted on signal or other mast. When white light is displayed, train must be stopped and inspected for dragging equipment. Notify Superintendent from first available point of communication.
- 25. Rule 204 (A) prescribes that copies of train orders will be furnished the rear trainman, such orders will only be furnished on trains designated. Nos. 3, 4, 7, 8, 9, 10, 27, 28, 31, 32 and sections thereof; also, extra passenger train whether operated as a section of regular train or as a passenger extra.
- 26. OSCILLATING EMERGENCY RED HEADLIGHT will be immediately displayed by day or night when a train is disabled or stopped suddenly by an emergency application of air brakes or when engineer and conductor find it necessary to stop train due to some defect which might cause accident, overrunning clearance point at meeting and waiting points, end of double track or junction.

Engineer of an approaching train observing display of emergency red headlight must stop before passing and be governed by conditions existing. If operating on adjacent track, ascertain and if safe for passage, then proceed at restricted speed until train is passed.

OSCILLATING EMERGENCY RED REAR END LIGHT is of two types-Automatic Control-Portable Manual Control-and except as otherwise provided, must be displayed by day or night each time train stops or is running at speed less than 18 MPH. Automatic Control type automatically functions in this manner. However, when train running at speed above 18 MPH and moving under circumstances in which it might be overtaken by another train or engine and during foggy and stormy weather, light may be operated manually with emergency switch and employes to afford other protection prescribed by rule.

THE USE OF EMERGENCY RED HEADLIGHT AND REAR END LIGHT DOES NOT IN ANY WAY RELIEVE ENGINE-MEN AND TRAINMEN FROM RESPONSIBILITY OF COM-

PLYING WITH RULES 99 AND 102.

Emergency red rear end light must be extinguished: when standing at origin and terminus stations of train run; when switching being performed from rear; when on siding to be passed by another train; and, when another train operating on adjacent track is approaching from rear, but not until it is known such train is not on same track.

Portable light must be removed before coupling to rear of such car.

Oscillating white light on engines will be displayed in addition to standard headlight governed by Rules 17 and 17(B). In

case of headlight failure it can be used as emergency headlight or as a focus light by push button control if desired. Enginemen and trainmen on trains and engines equipped with

oscillating emergency red lights must familiarize themselves with the operation of the lights.

- 27. Rule D-97 is in effect on this division.
- 28. Before picking up cars of peeled pulpwood from industry at any station, conductor must examine lading; if lading is not protected with woven wire to prevent sliding out on sides, or,

when wire is not available, with boards and stakes, then car must not be moved from industry. The fact must be promptly

reported by wire to the Superintendent. 29. Whistle Signals for Routes at Junctions and Interlockings:

Diverging route 2 long Siding 4 short Against current of traffic ______1 long, 1 short

Eastward trains, on signal 30.2 approxmiately one mile west of Bridge 29. Westward trains on Signal 28.1 approximately 1 mile east of Bridge 29.

22. MANUAL INTERLOCKINGS.

23. MANUAL INTERLOCKINGS WITH DUAL CONTROL

SWITCHES. Boylstonjunction with 1st Subdivision Swan Rivercrossover and junction with 10th Subdivision

Gunn _____junction with 11th Subdivision Boylston, switches electrically controlled by operator at Saunders. For further details see complete instructions on First Subdivision governing operation of this Interlocking.

24. AUTOMATIC INTERLOCKINGS. Bridge 29 _____gantlet

Philbin east and west siding switch Schley, 2.04 miles west of MStP&SSM. RR. crossing Bridge 29: Release for westward route on westward track is located in release box at eastward home signal.

Release for eastward route on eastward track is located in release box at westward home signal. Cranks for hand operation of smashboards are attached by

chains to the mechanism.

If train moving against the current of traffic is stopped by dwarf signal, trainman will operate release located in release box nearest the dwarf signal, and if signal does not indicate proceed when release returns to normal position, trainman may flag train through gantlet making certain that smashboard at

Philbin: Interlockings at the east and west siding spring switches operate automatically for all movements, except westward movements to the siding at the east switch, and eastward movements to the main track at the west switch, which require hand operation of spring switch. Eastward trains on siding take preference over eastward trains on main track approaching east switch, and westward trains on main track take preference over west-

opposite end of gantlet is in the reverse position.

ward trains on siding approaching west switch. For further information see instructions posted in push button boxes, located at eastward home signal at east switch, and at westward home signal at west switch.

25. SWITCH INDICATOR. Cloquet, Switch Indicators, each consisting of a yellow light unit

(normally dark) and a switch-key-controller mounted on an iron mast, located near the east and west yard switch and both ends of crossovers between main tracks at east and west end of the yard, must be operated by a member of the crew, who, together with the engineer, must observe and be governed by their indications before lining switches, fouling main track, or making crossover movement from one main track to the other. See further instructions posted on iron mast.

Alford, Switch Indicators, each consisting of a yellow light unit (normally dark) and a switch-key-controller mounted on an iron mast, located at west crossover switch and at the clearance point of the spur switch, must be operated by a member of the crew,

who, together with the engineer, must observe and be governed by their indications before lining switches, fouling main track, or making crossover movement from one main track to the other. See further instructions posted on iron masts. 26. CTC extends between westward color-light type interlocking

signal 11/2 miles west of Schley and eastward color-light type interlocking signal located 1000 feet east of east switch at Cass Lake. Hand throw switches at Soo Jct. and Webster Spur, M.P. 158.5, are electrically locked. Instructions for their operation are located in the lock cases at the switches.

FOURTH SUBDIVISION

(Main Line)

1.	MAXIMUM PERMISSIBLE SPEED FOR TRAINS. Between Passenger Cass Lake and Crookston Yard	Freight 45 MPH
2.	SPEED RESTRICTIONS. Between Home Signals of Interlockings at: Bemidji. Erskine.	20 MPH

Crookston Yard.

6. SPEED TEST BOARDS.

3. ENGINE RESTRICTIONS ON INDUSTRY TRACKS.

Q-1 engines on Land O'Lakes Spur, Fosston 5 MPH Q-1 engines on MStP&SSM. RR. transfer track, Erskine 5 MPH

TRAIN REGISTER EXCEPTIONS. Bemidii. Tilden Jct. and Crookston Yard, register only for trains originating and terminating at these stations, except Nos. 35 and 36 will register at Tilden Jct.

CLEARANCE PROVISIONS AND EXCEPTIONS RULE 83(B). Mesabi Division clearance received at Crookston will clear train

at Crookston Yard.

Engineers shall test speed of their trains passing following point as compared with Speed Table: Eastward, between MP 86 and MP 87 approximately 2 miles east of Wilton. Westward, between MP 87 and MP 86 approximately 3 miles

west of Bemidii. 7. MANUAL INTERLOCKINGS.

Bemidji N. P. Ry. crossing
Erskine MStP&SSM. RR. crossing Tilden Jct. N. P. Ry. crossing

8. AUTOMATIC INTERLOCKINGS.

9. Crossings as herein shown at the following stations are equipped with automatic signals and switch-key-controllers. When engines or cars are standing in circuit but crossing not fouled, signals must be cleared for highway traffic by operating controllers. When crossing is to be fouled, controllers must first be operated

to set signals at stop position against highway traffic. Bagley, Highway No. 92 crossing, just east of depot. Lengby, Till Avenue crossing, just west of depot.
Industry track does not include automatic protection and all impending train and engine movements over this crossing must be flagged by trainman on the ground.

10. At Bemidji, Soo Line trains will enter and leave Great Northern main track at a hand-operated switch located 2300 feet east of Bemidii Depot.

FIFTH SUBDIVISION

(Park Rapids Line)

1. MAXIMUM PERMISSIBLE SPEED FOR TRAINS.

Steam Diesel or Gas-Electric Passenger Freight Passenger Freight Between Park Rapids Jct, and 35 MPH 30 MPH 25 MPH 25 MPH

2. SPEED RESTRICTIONS. Between Home Signals of Interlockings at: 20 MPH Park Rapids Jct.

Wadena.

TRAIN REGISTER EXCEPTIONS. Register of regular trains at Sauk Centre will cover their arrival at Park Rapids Jct. All Fifth Subdivision trains will register at Sauk Centre.

CLEARANCE PROVISIONS AND EXCEPTIONS RULE 83(B). Mesabi Division clearance received at Sauk Centre will clear train at Park Rapids Jct.

5. Cass Lake, normal position south wve switch is for east leg of

6. AUTOMATIC INTERLOCKINGS. Wadena.

SIXTH SUBDIVISION

(Princeton Line)

1. MAXIMUM PERMISSIBLE SPEED FOR TRAINS. Passenger Freight Retween

Elk River and Milaca Jct. 20 MPH 20 MPH

2. SPEED RESTRICTIONS.

Between Home Signals of Interlocking at Elk River.... 20 MPH 3. CLEARANCE PROVISIONS AND EXCEPTIONS RULE 83(B).

(a) Mesabi Division clearance received at Elk River will clear train at N. P. Rv. Jct.

(b) At Milaca Jct., clearance under which Nos. 305 and 315 arrive will clear Nos. 316 and 306, respectively, at that point.

4. SEMI-AUTOMATIC INTERLOCKINGS. Complete instructions for operation of interlocking are located at "Release" box.

SEVENTH SUBDIVISION

(Allouez Line)

1. MAXIMUM PERMISSIBLE SPEED FOR TRAINS.

Passenger Freight Between

2. SPEED RESTRICTIONS.

Between Allouez and Saunders, all trains and engines will be governed by Rule 93.

3. Double track extends between Allouez and east end Bridge A-9.

4. Extra trains will use double track with current of traffic between Allouez and east end Bridge A-9, and also single track between east end Bridge A-9 and Saunders without train orders or clearance where they will receive train orders or clearance.

5. Allouez Ore Docks, when doubling two tracks of empty cars, first pull track with the most cars down to clear then double the shorter track to it. When coupling up a track of cars on the dock and there are cars on the outer end, set sufficient hand brakes, not less than two, on outer cars to hold slack before coupling into them.

6. Allouez Ore Dock No. 4, engines moving on Tracks 1 and 2 or 3 and 4 must stop and know there is sufficient side clearance

before passing each other.

7. SPRING SWITCHES WITHOUT FACING POINT LOCK.

Allouez, Roundhouse wye tracks, Normal position west switch is for west leg of wye, north switch is for east leg of wye, east switch is for north coal chute track.

8. MANUAL INTERLOCKINGS.

Saundersjunction with 1st Subdivision

9. MANUAL INTERLOCKINGS WITH DUAL CONTROL SWITCHES.

Bridge A-9 End of double track. Dual Control switch located at end of double track at Bridge A-9, is equipped with two levers for hand operation. These are latched and locked with a standard switch lock. Instructions for hand operation of dual control switch are posted in telephone booth near switch.

EIGHTH SUBDIVISION

(Casco Line)

1. MAXIMUM PERMISSIBLE SPEED FOR TRAINS. Passenger Freight

Bridge 59.3 and Curve 1.50 miles week of

2. AUTOMATIC INTERLOCKINGS.

3. DRAGGING EQUIPMENT DETECTOR INDICATOR. Eastward Trains, on iron mast approximately 6400 feet east of

Signal 61.4. All eastward trains on Casco Line, before coming out on Third Subdivision at Brookston, will call Dispatcher on telephone and find out location of westward trains as westward trains with diesels do not stop at Brookston.

NINTH SUBDIVISION

(Chisholm Line)

1. SPEED RESTRICTIONS.

All trains will approach mining spurs at restricted speed.

2. Between Chisholm Jct. and G. N. depot Chisholm, trains and engines will be governed by Rule 93.

Between St. Clair Jct. and Chisholm Jct., main track will be used jointly by G. N. and DM&IR. Rys. and authority for train movements is controlled by DM&IR. Ry. and DM&IR rules will govern.

Eastward G. N. trains will secure clearance and orders from Operator at Emmert who must obtain authority from DM&IR. before issuing. Westward G. N. trains will secure clearance and orders from

G. N. Operator at Chisholm who must obtain authority from DM&IR. before issuing.

TENTH SUBDIVISION (Swan River-Virginia Line)

1. MAXIMUM PERMISSIBLE SPEED FOR TRAINS.

Passenger Freight Between

Swan River and Emmert 45 MPH 35 MPH Emmert and Virginia 35 MPH 30 MPH

2. SPEED RESTRICTIONS.

Trains, except first class, will approach mining spurs at restricted Between Home Signals of Interlockings at: 20 MPH

North Mitchell. Emmert Tower. Virginia, D. W. & P., Virmount Tower. D. W. & P., Crescent Ave.

Swan River, westward.

Hibbing.

3. ENGINE RESTRICTIONS ON INDUSTRY TRACKS.

Buhl, engines not permitted on Buhl Coal Spur Bridge. Dunwoody Mine Spur New Loading track, engines must not use

either turnout to loading track account curvature.

4. CLEARANCE PROVISIONS AND EXCEPTIONS RULE 83(B). At North Mitchell, Ruby Jct., trains for which these points are

initial stations may proceed without a clearance. 5. Double track extends between Kelly Lake and Emmert Tower.

Trains or engines moving in this territory must keep to the left unless otherwise provided. Trains and engines will run with the current of traffic between

Kelly Lake and Emmert Tower without train orders or clearance. 6. Between Emmert Tower and DM&IR. Jct. east of Scranton Mine

inside of box. Switch-key-controller located on north side of

Crossing, G. N. double track will be used jointly by DM&IR. trains. G. N. rules and special instructions will govern. 7. Hibbing, push button controls located on Griswold Signals at First, Third and Fifth Avenues east for manual control of crossing signals. Instructions covering use of push buttons are posted

depot controls signals at Third Avenue east for Westward movements. When a train or engine making westward movement on

westward main track is stopped between Fifth and Third Avenues east, and will not foul Third Avenue East, crossing signals may be set clear for highway traffic by inserting switch key in controller and turn to right. After signals have been set clear, they may be changed to indicate "Stop" for highway traffic by

8. Crossings as herein shown at the following stations are equipped with automatic signals and switch-key-controllers. When engines or cars are standing in circuit but crossing not fouled, signals must be cleared for highway traffic by operating controllers. When crossing is to be fouled, controllers must first be operated to set signals at stop position against highway traffic. Trains must not exceed a speed of 10 MPH through the approach cir-

inserting switch key in controller and turn to left.

cuits of this crossing. Virginia, Highway No. 53 crossing, 6th Avenue West, leading to Columbia Mine.

 Between Wilpen Jct. and St. Clair Jct., and between Buhl and Dormer Jct., DM&IR. trains will use G.N. main track jointly and be governed by G.N. rules and special instructions. Normal position of switches at Wilpen Jct., St. Clair Jct., and Dormer

Jct., is for G.N. 10th Subdivision. 10. Susquehanna Shaft, necessary to shove all empties under the head frame, which will not clear a man on top or side of ore car. Crews must stop before shoving under the head frame and brakemen will walk by the shaft to a point where they can give signals in shoving empties onto the tail tracks. When placing empties for shaft loading, fill the north tail track through the crossover first, as an engine will not go over this crossover. Then fill the south tail track. When placing

empties for screener loading, fill the south tail track first, then the north tail track as an engine cannot move through the crossover into the south screener tail track. Virginia, trains and engines must stop before passing over crossing U. S. Highway No. 53 leading to depot, and a member of crew on ground at the crossing will protect movement. 12. Virginia, trains or engines going beyond "Stop" sign at Columbia Mine must stop and examine clearance between cars under direct

loading pocket and runaround track. 13. Train and engine movements from main line on new Hull Crusher Spur over Kelly Lake road crossing must be protected by a member of the crew due to restricted view approaching

this crossing. 14. CROSSOVERS ON DOUBLE TRACK.

Facing Point Trailing Point Mahoning Hull Crusher Ruby Jct. Agnew Scranton Hibbing, east crossover Hibbing, west crossover North Mitchell

15. SPRING SWITCHES WITHOUT FACING POINT LOCK. Kelly Lake, west switch transfer cinder pit track,

Normal position is for mallet cinder pit track. roundhouse wye tracks. Normal position east switch is for mallet cinder pit track, south switch is for east leg of wye.

16. MANUAL INTERLOCKINGS. Hibbing, 0.58 miles west ofScranton Mine crossing

17. MANUAL INTERLOCKINGS WITH DUAL CONTROL SWITCHES.

18. AUTOMATIC INTERLOCKINGS.

west switch is for west leg of wye.

19. SWITCH INDICATORS.

Kelly Lake, 1.84 miles east of, at Morton Mine Spur, Kelly Lake, 2.23 miles east of, at Agnew-Hull Rust Mine Spur, Hibbing, 0.34 miles west of, at DM&IR. Ry. Scrap Iron Spur, Hibbing, 0.31 miles west of, at west switch of G.N. Ry. Industry Track

Indicator, consisting of a single yellow light unit (normally dark) and a switch-key-controller, mounted on an iron mast located at the clearance point of the turnout, must be operated by a member of the crew who is to line the switch, and who, together with the engineer, must observe and be governed by its indication before fouling the main track or lining the main track switch. See further instructions posted on iron mast.

ELEVENTH SUBDIVISION

(Gunn Line)

1. MAXIMUM PERMISSIBLE SPEED FOR TRAINS.

Between Passenger Freight
Kelly Lake and Gunn 45 MPH 35 MPH

Hill Annex Spur. Majorca Mine Spur.

3. Between Calumet and oil spur, Coleraine, main track will be used jointly by G. N. and DM&IR. Rys. and authority for train movements is controlled by G. N. Ry. and G. N. rules and Special Instructions will govern.

4. St. Paul Mine Spur, Third Avenue, Keewatin, trains will not exceed a speed of 12 MPH through the approach circuits of the signal system covering crossing signals for Highway No. 169.

- 5. Harrison Mine Spur, Nashwauk, trains will not exceed a speed of 12 MPH northbound into the mine or 6 MPH southbound out of the mine through the approach circuits of the signal system covering crossing signals for Highway No. 169 crossing.
- 6. Danube Mine Spur, trains must not exceed speed of 5 MPH across blacktop highway located 1900 ft. from main line switch. When cars are pushed ahead of the engine, requirements of Rule 103 will govern.
- 7. Danube Mine Spur stop sign erected at point 1,900 feet from fouling point of main track turn out. Westward trains on this spur will stop at this sign and will communicate with dispatcher by telephone located at this sign, and know that way is clear on main track before proceeding with train down the descending grade between stop sign and main line switch.
- 8. Telephone in service near switch at the tail of the wye, Canisteo Yard. Crews coming from the Buckeye and Canisteo Mines will communicate with the dispatcher and know that way is clear on the main track before proceeding with train down the descending grade on both legs of the wye.
- Westward signal 22.9 near clearance point at Danube Mine Spur governs train and engine movements from spur to main track. Signal 22.9 normally indicates "Stop and Proceed" and

will not indicate the condition of the block until switch is lined for movements from spur to main track. Automatic block signal rules 501A to 501C will govern in their use.

Block signal located at Mesabi Chief Mine spur normally displays indication, Rule 501AA and governs movements from spur to main track; after lining switch, if no conflicting movement is evident on main track, movement may be made in accordance with signal indication after complying with Rule 513.

10. SPRING SWITCHES WITH FACING POINT LOCK.

Nashwauk, west north storage track switch.

west south storage track switch.

Calumet, west new yard switch.
Canisteo, west new yard switch.
Normal position is for main track.

11. SPRING SWITCHES WITHOUT FACING POINT LOCK. Kelly Lake, west wye switch,

Normal position is for 11th Subdivision.

13. SWITCH INDICATORS.

SWITCH INDICATOR
St. Paul Mine Spur
Hawkins Mine Spur
O'Brien Mine Spur
Patrick Mine Spur

Calumet, west old yard switch

Indicators, consisting of a single yellow light unit (normally dark) and a switch-key-controller, mounted on an iron mast located at the clearance point of the turnout, must be operated by a member of the crew who is to line the switch, and who together with the engineer, must observe and be governed by its indication before fouling the main track or lining the main track switch. The west old yard switch at Calumet is equipped with push button control rather than switch-key-control.

See further instructions posted on iron mast at each point.

- 14. Crossings as herein shown at the following stations are equipped with automatic signals and switch-key-controllers. When engines or cars are standing in circuit but crossing not fouled, signals must be cleared for highway traffic by operating controllers. When crossing is to be fouled, controllers must first be operated to set signals at stop position against highway traffic. Keewatin, St. Paul Mine Spur, 3rd Avenue, Highway No. 169. Harrison Mine Spur, Highway No. 169, one mile west of Nashwauk.
- 15. INSTRUCTIONS GOVERNING OPERATION OF TRAINS AND ENGINES WITHIN CENTRALIZED TRAFFIC CONTROL SYSTEM.

CTC extends between westward home signal just west of west wye switch Kelly Lake and eastward home signal just east of east siding switch Moore.

Kelly Lake is the control station for the CTC under control of the train dispatcher.

All main track switches within CTC, except switches at controlled sidings, are hand operated and equipped with electric locks governed by Rule 283.
